### Voluntary Results Feedback Form

>	I am an examiner in Workgroup: Example: 1610
>	Relevant prior art found, search results used as follows:
	☐ 102 rejection
	☐ 103 rejection
	☐ Cited as being of interest.
	Helped examiner better understand the invention.
	Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
	☐ Foreign Patent(s)
	<ul> <li>Non-Patent Literature         (journal articles, conference proceedings, new product announcements etc.)</li> </ul>
>	Relevant prior art not found:
	☐ Results verified the lack of relevant prior art (helped determine patentability).
	☐ Results were not useful in determining patentability or understanding the invention.
Co	mments:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GC GB-A-2239245 discloses a recombinant polypeptide BHC-11 which comprises CC an antigen obtained from the non-structural coding region (NS) (the 3'CC end) and one antigen from the structural coding region (S) (the 5' end) CC of the NANBH virus. Specifically BHC-11 (AAQ46191) contains a portion of the non-structural region of the virus, called NS5, (putative replicase) CC at the N-terminus joined via a synthetic linker to a portion of the Structural region which contains almost all the core protein sequence (9 amino acids from the N-terminal are not present) and a part of a sequence CC from the structural region called E1. It is disclosed that BCH-11 may be used in diagnosis of PT-NANBH. If at least three different PT-NANBH CC antigens are used to screen for PT-NANBH, the screening is much more censitive as compared to the use of only two PT-NANBH antigens. Pref. CC antigens are described in AAQ46192-94. Two new antigenic regions of the CC INANBH genome are given in AAQ46192-99. AAQ46202 describes an improved CC PT-NANBH recombinant polypeptide. (Updated on 25-MAR-2003 to correct PN CC field.) (Updated on 27-AUG-2003 to correct OS field.)

The obtained fragment was then cloned into pDX136. Transformants were analysed to identify those which contained the NS3 sequence inserted in the correct orientation between the NS5 and core parts of pDX136, this was called pDX208 (AAQ46202). Recombinant baculovirus BHC-28 was produced. Insect cells infected with BHC-28 produce antigen NS5-NS3-core. If at least three different PT-NANBH antigens are used to screen for PT-NANBH, the screening is much more sensitive as compared to the use of only two PT-NANBH antigens. Pref. antigens are described in AAQ46192-94. Two new antigenic regions of the PT-NANBH genome are given in AAQ46192-99. AAQ46202 describes an improved PT-NANBH recombinant polypoptide. It was isolated from serum of humans infected by the virus. Genomic RNA from viruses pelleted from the infected serum was used to prepare a cDNA library in lambda gtll which was screened with antibodies from the original serum and oligonucleotide probes. One of the positive plaques to be obtained was JG3. DNA was extracted from denatured phage stocks, amplified by PCR and sequenced. See early AAQ12236 and AAQ12238-Q12242. Pref. antigens are described in AQ46192-94. Two new antigenic regions of the PT-NANBH genome are given in AAQ46198-99. AAQ46202 describes an improved PT-NANBH recombinant polypeptide. New recombinant polypeptide for diagnosing hepatitis  ${\tt C}$  - contains three distinct antigens from different viral regions, also useful in protecti protective

Example 1; Page 43-53; 99pp; English

The NS4 region from the 3' region of the PT-NANBH genome (AAQ46195) is amplified by PCR using primers D224 and D226 (AAQ46196-97) and the fragment (AAQ46198) is cloned into a vector and expressed in infected insect cells. The recombinant virus (BHC-19) was able to express the NS4 specific recombinant protein at low levels in the infected insect cells. If at least three different PT-NANBH antigens are used to screen for PT-NANBH, the screening is much more sensitive as compared to the use of only two PT-NANBH antigens. Pref. antigens are described in AAQ46192-94. Two new antigens. Pref. antigens are described in AAQ46192-99, AAQ46202 describes an improved PT-NANBH recombinant polypeptide. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 27-AUG-2003 to

CC

CHEN7/J4NS5B) replicon. The invention provides sub-genomic replicons of CC (BB7/J4NS5B) replicon. The invention provides sub-genomic replicons of CC (CC) comprises an NS3 nucleotide sequence ADD93721 that encodes the first 75 cc comprises an NS3 nucleotide sequence ADD93721 that encodes the first 75 cc contiguous N-terminal amino acids of the NS3 of genotype 1b, of a BB7 CC contiguous N-terminal amino acids of the NS3 sequence from any of the coding sequence replicon may comprise an NS3 sequence from any of the coding sequence replaced by the BB7 strain NS3 sequence, especially comprise the replicon sequence from HCV genotype 1b (H77) strain) or genotype 1b (Strain) Stable cell lines expressing and replicating functional CC (J4 strain) Stable cell lines expressing and replicating functional CC (HCV) strain BB7 are provided. These can be used to screen for compounds that modulate viral replication. The sub-genomic HCV replicons of CC all 6 major genotypes and subtypes to facilitate screening, testing and cevaluating anti-infective agents for HCV disease(s).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a self-replicating hepatitis C virus (HCV)

CC polynucleotide molecule comprising a 5'-non translated region (NTR),

CC where guanine at position 1 is substituted for adenine, a HCV polyprotein

CC region coding for a HCV polyprotein; and a 3'-NTR region. The self-

CC replicating Hepatitis C virus (HCV) RNA molecule is self-

CC replicating Hepatitis C virus (HCV) RNA molecule is also

CC useful for efficiently establishing cell culture replication. The self-

CC replicating polynucleotide molecule contains a 5'-NTR, where G at

CC position 1 is substituted for A, and therefore provides an alternative to

CC existing systems comprising a self-replicating HCV RNA molecule that, in

CC conjunction with mutations in the HCV non-structural region, such as the

CC (12042)C/R mutations, transduces and/or replicates with greater

CC self-replicating HCV polynucleotide molecule created from the replicon

CC self-replicating HCV polynucleotide molecule created from the replicon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best Local Similarity
